Product description

Post-ICU, the digital diary that cares

Post-ICU is the only digital diary that alleviates Post-Intensive Care Syndrome (PICS) symptoms. ICU diaries are an integral part of the family engagement element of the Society of Critical Care Medicine's ICU Liberation Bundle.

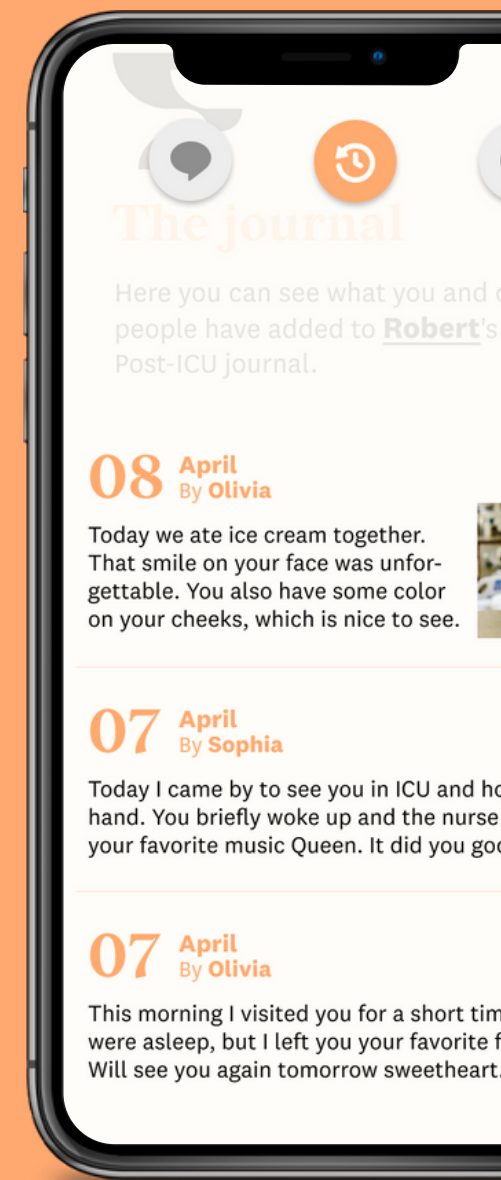

Engaging families in care fosters better communication with caregivers. Post-ICU helps to process emotional events through journaling and provides a narrative for the patient to reconstruct their memories. Journaling prevents and alleviates anxiety, depression and PTSD. In this way, Post-ICU contributes to patient, family and nurse satisfaction.

Unique selling points

Post-ICU, the digital diary that cares

- Easy access and sharing across time zones, distances, and devices
- Compliant with standard EU and US hospital security, legal and privacy practices
- Involves families in the care process
- Enhances communication between professional caregivers, patients and their loved ones
